

Task overview

DESIGN A SAAS APPLICATION INTERFACE. Design a basic interface for a Task Management SaaS app, enabling users to create, edit, delete tasks, and manage projects. [View](#)

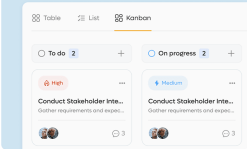

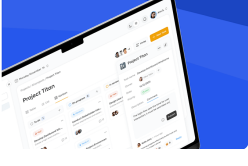

It was important for the client to use components, styles, and variables for future product development.

Main screen

Convenience and clarity
This screen has all the necessary filters for better perception and quick task management.

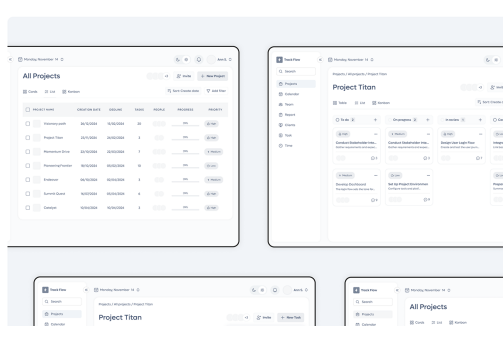

A convenient and clear main screen will help you control and manage your task list

Wireframes

ESSENTIAL PART Wireframes allow me to focus on the structure, hierarchy, and functionality of the layout without getting distracted by visual details. This step saves time and helps identify potential issues early. [Process](#)

I always start with a wireframe to focus on structure and functionality, building a solid foundation for the design.

Components & variants

Consistency and efficiency
Components and variants streamline design and maintain uniformity.

I focus on components and variants to ensure consistency and flexibility, building a solid foundation for the design.
